

# SENSES PROJECT

SOCIAL ENTREPRENEURSHIP AND SOCIAL  
INNOVATION HAPPENS TO EVERY STUDENT

## ABOUT THE PROJECT

The SENSES project will support enterprise and entrepreneurship education, by providing teachers within primary education with an understanding of social entrepreneurship and social innovation and access to a set of innovative tools which can be used to enhance skills in teaching SEI.

In addition, the project will support learners aged between 7-12 in developing a set of structured competences required to be enterprising and entrepreneurial in a social context. These competences will include adaptability, solving complex and 'wicked' problems and creativity and innovation.

## 1. CAPACITY BUILDING FOR SENSES TEACHERS: A COMPLETED PACKAGE

The IO1 - Capacity building for SENSES teachers will be a targeted, completed approach developing amongst the teachers at primary education, with knowledge, skills, guidelines and proper methodology for Social Entrepreneurship and Innovation (SEI) in the classroom.

This IO was designed in order to give the teachers the ways of how to provide their students with the skills and knowledge they need to succeed in the 21st century and to prepare to solve (or at least) to respond to the societal challenges and the world's most urgent problems; equipping teachers is the channel of equipping students to become 'pathfinders' to systemic solutions.

Our main principle is to invest in teachers' understanding and knowledge of SEI, thus, this will be the way of maximizing the number of children understanding and being immersed in the 'world' of social entrepreneurship and innovation.

Our set of learning materials and resources for teachers will be uploaded shortly on our SENSES platform and it will include a knowledge base reviewing current thinking and practices, lesson plans, learning activities and assessment tests.

## 2. OFFICIAL PROJECT MEETING IN ATHENS! 3. THE SENSES DIGITAL ENVIRONMENT

The second SENSES partner meeting was held in Eurotraining's premises in Athens, Greece on the 11th and 12th of November. During the first day of the meeting, SFEDI, the overall project coordinator, refreshed the main tasks to be taken into consideration, updated the team on the progress of the project and gave an overview of the key milestones. In response, all partners presented the module materials developed and contributed with their comments concerning the results of the first Intellectual Output: Capacity building for SENSES Teachers. After finalizing the materials produced, all partners will continue with the development of the second Intellectual Output: Engagement Package for students, including digital games, videos, knowledge base material and learning activities. During the second day of the meeting, the dissemination of the project was discussed as well as guidelines for the financial administration and project management were provided. The quality assurance and evaluation activity was reviewed which highlighted the scope of the internal and external quality measures. The SENSES digital environment will be an important asset for the educational materials produced by the consortium team. It will be shortly developed and presented in order to host the materials from IO1.

if you are interested in engaging the materials developed through the project please do contact us at: [info@projectsenses.eu](mailto:info@projectsenses.eu)
