

SENSES PROJECT

SOCIAL ENTREPRENEURSHIP AND SOCIAL
INNOVATION HAPPENS TO EVERY STUDENT

INTELLECTUAL OUTPUT 1

SENSES project IO1 aims to provide capacity building package for teachers with a holistic approach in mind. The aim is to qualify teachers in primary education, with knowledge, skills, guidelines, and proper methodology for Social Entrepreneurship and Innovation (SEI) in the classroom.

This IO was designed in order to give the teachers the ways of how to provide their students with the skills and knowledge they need to succeed in the 21st century and to prepare to solve (or at least) to respond to the societal challenges and the world's most urgent problems; equipping teachers is the channel of equipping students to become 'pathfinders' to systemic solutions.

Our main principle is to invest in teachers' understanding and knowledge of SEI, thus, this will be the way of maximizing the number of children understanding and being immersed in the 'world' of social entrepreneurship and innovation.

Our set of learning materials and resources for teachers will be uploaded in May 2022 on our SENSES platform and it will include the knowledge base reviewing current thinking practice, lesson plans, learning activities and assessment tests.

Our project's second Intellectual Output, is a resource pack, that provides topics for discussion, activities videos, questions addressed to pupils 7-12 to help them build the knowledge and skills needed to develop a social enterprise.

This IO was designed to increase their knowledge of social innovation and social entrepreneurship, whilst also developing these core skills for learning. Encouraged think of real-world problems and the role that businesses and social enterprises can play in addressing them.

8 topic ideas were decided and were divided to each partner.

- Learn form others experience
- Critical thinking and problem solving
- Collaboration
- Creativity and innovation
- Citizenship
- Sustainable Development goals
- Communication
- Social Entrepreneurship

All topics are interrelated and they all include Digital Game, a video collection, a presentation, an inspiring case study and a practical activity.

3RD TRANSNATIONAL PARTNER MEETING IN ITALY! 3. THE SENSES DIGITAL ENVIRONMENT

During the 30th and 31 st of March the Third Transnational Meeting of Senses project was in Italy. The meeting, hosted by the Italian partner "Specchio Magico" took place in Lecco. On the first day, the partners were invited to the Istituto Comprensivo di Missaglia where, some students who adhere to the Gears project, showed some activities; many of these are part of the Intellectual Outputs of the Senses project. The students, aged between 8 and 14 years, shared with enthusiasm and commitment some of the activities they daily carry out within Gears: these tasks aimed at promoting cooperation, transversal functions, metacognitive and relational skills. In the afternoon, the partners reviewed IO1 and shared IO2 content. Within IO2 (Social Entrepreneurship and Innovation happening to all students) the partners showed what was produced: a specific package for students containing specific materials and activities which will develop an understanding of social entrepreneurship. Within each package, each partner has developed six sections: digital game, video, presentation, exemplary case, activity, review. On the following day, the partner s focused on dissemination and the creation of the digital platform where all the materials produced (IO3) will be uploaded. The next dates of meeting and sharing were then defined. The Fourth and final Transnational Meeting will take place in Newcastle, hosted by SFEDI, in October 2022 and, on that occasion, the final project conference will be held.
